-------------------------------	------------------------------------

Instructions

Watch the video, and answer the following questions:

1. What type of tissue is used for the experiment?
2. What concentrations of the solution are used (including the units)?
3. Which concentrations result in a movement of water into the cells?
4. According to the graph, the cells being tested have a water potential that is equivalent to what concentration of solution?
5. If you repeat this experiment in class, you may get a different result. Can you think of any reason(s) why?
